# ISSUER WALLET

## Multi-functional solution to support Issuer's wallets and apps

Developed by CARTSYS LLC, the Digital Services Platform (hereinafter referred to as – DSP) to support cloud-based payments. MAP ISSUER is a solution for creating your own digital mobile wallet. Allows the bank to develop the functionality of a digital wallet, supplement it with new operations. The bank's mobile wallet can become not only a digital payment tool, but also allows you to manage bonuses, electronic tickets, loyalty cards, payments and transfers between customers.

## Technology Capabilities of MAP ISSUER solution

- Digitization of payment cards (contactless, contact and magnetic);
- No payment card data in your phone;
- Securely store the data used to perform the operation;
- Life Cycle Management of digitized cards;
- Support for multiple digitized cards on the same device or on different client devices;
- Ability to block all digitized cards in case of phone loss;
- Protection against unauthorized use by means of a fingerprint or password;
- Optimization of new cards - digital card is created as an additional card under customer warranty.

## Wallet functionality

- Contactless payments: Tap NFC, Scan QR;
- Default payment card assignment;
- Ability to digitize a card on another phone under customer warranty;
- Money transfers between cards P2P;
- Link to transfers via SMS;
- Displaying card number for online payments;
- Suspending or deleting digitized cards;
- History of transactions;
- Actions history.
