

TRANSENIX is an innovative system that allows merchants to accept contactless payments directly on their NFC-enabled smartphones. TRANSENIX solution makes it possible to use modern smartphones and tablets as a payment terminal. Customers can make contactless payments using their physical cards, mobile wallets and wearable devices. The solution uses the Tap to Phone technology, which does not require additional external devices to the smartphone.

How it works

1. The merchant indicates the amount of the transaction in the application;
2. The client applies a card or gadget for payment to the Merchant's smartphone;
3. The transaction is processed by the Acquiring Bank and reports the result (successful);
4. The Merchant, at the request of the Client, sends an electronic check to the mail or messenger.

BANK benefits

- Creates an innovative image;
- No costs for any additional devices and their logistics;
- Advanced merchant monitoring mechanisms;
- Automation of merchant registration processes;
- Extensive automatic capabilities to block the application in case of detection of any active threats;
- Device usage history monitoring.

MERCHANT benefits

- The mobile application does not require additional devices;
- Creates an alternative payment method;
- Creates an innovative image for your business;
- The mobile application is always available for work 24/7;
- Registration and activation in three clicks
- Intuitive user interface;
- Merchant can view transaction history.

SECURITY and RELIABILITY

The security and reliability of the solution meets the requirements of international payment systems Visa and Mastercard, Security Evaluation of the Riscure laboratory, merchants and buyers who use our solution on a daily basis.
